

1 **Abstract of Disclosure**

2 A wrench includes a head, a first handle, a second handle and a retaining
3 device. The first includes first and second end. The first end of the
4 first handle is pivotally connected with the head about a first axis. The
5 second handle is pivotally connected with the second end of the first
6 handle about a second axis. The retaining device can retain the first
7 handle in position relative to the head, and the second handle in position
8 relative to the first handle.
